23. Problem: (use additional Sheets if necessary)
The Data Pool Web Access application will be installed at the DAACs on x0mss20. The Web Access application uses a COTS product called WebGlis (freeware from USGS) to provide mapping capabilities on the GUI. WebGlis med/high resolution map data is stored in a data file approx. 2 GB in size. There is currently not enough disk space on x0mss20 to allow the WebGlis data file to be installed there. Available disk space has been identified on the x0ins01 host; this disk space was originally slated for JEST map data, but as JEST was not deployed, the disk space has remained unused.

24. Proposed Solution: (use additional sheets if necessary)
Move one of the 9GB client_map disks from x0ins01 to x0mss20. Create a partition on this disk for storing the Webglis map data.

25. Alternate Solution: (use additional sheets if necessary)
Install the webglis map data on a 9 GB drive on x0ins01, and create a mount point so that this drive is accessible on x0mss20.

26. Consequences if Change(s) are not approved: (use additional sheets if necessary)
DataPool Web Application spatial applet will not be able to support medium and high resolution map data.

27. Justification for Emergency (If Block 15 is "Emergency"):
